block: complete the contract before scoring
Tools hub
models and datasets across scales
Case contract
target and boundary
heat paths, fluid inputs and outputs
time basis, units
sensors, uncertainty
rights
Evidence gate
admit or conditional
Adapters
map the case to solver inputs and outputs back; unsupported outputs are not imputed
M1 whole-rack balance
M2 two-node network
M3 four-branch network
External solver (planned)
Common metrics
return temperature
hardware state
branch flow
residuals
run record
Claim tier
Verification
Diagnostic
Validation (not reached here)
gate status, not metric value, sets the permitted claim tier
